

IT MAKES SENSE TO  
TRUST YOUR SENSES.

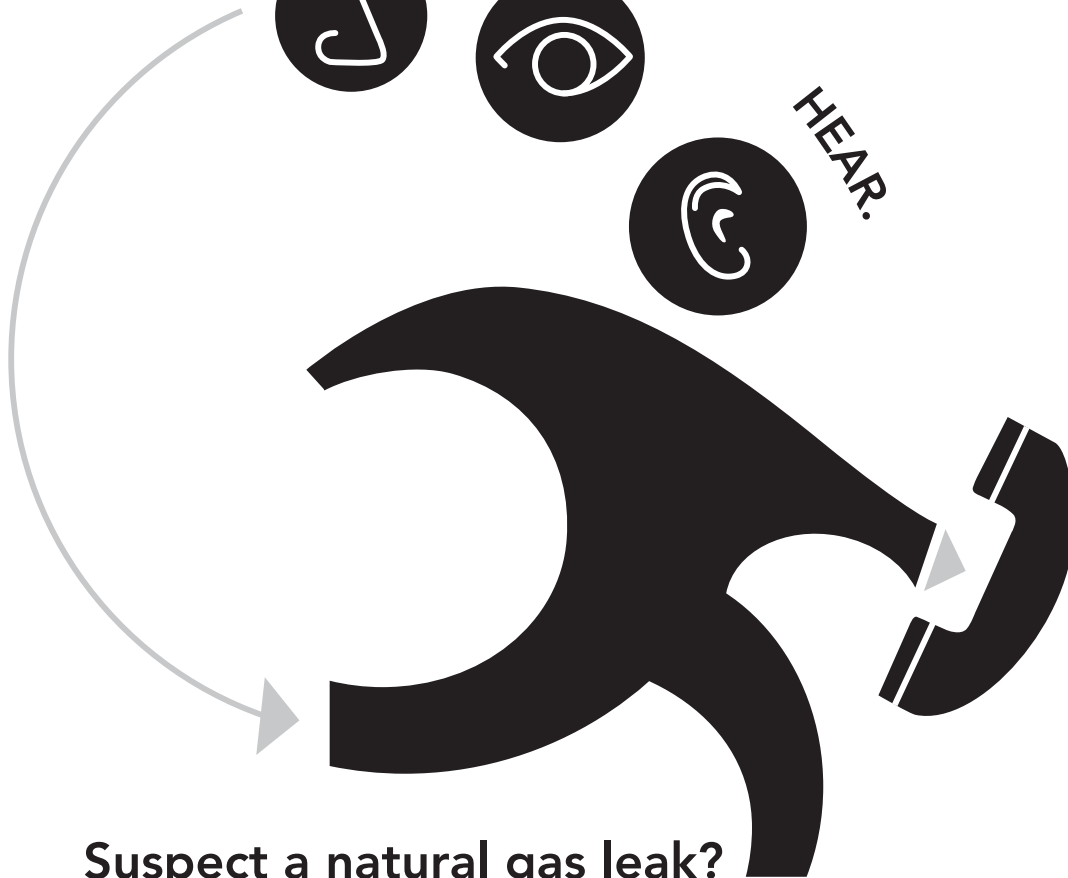

SMELL.

SEE.

HEAR.

Suspect a natural gas leak?

First, move your feet!

Then call when you're down the street.

Outside or in, detecting a natural gas leak is easy. To help you **SMELL** a leak from a gas line or appliance, a familiar odor like rotten eggs is often added to natural gas. Or you might **SEE** blowing dirt, bubbling water, or an unusual area of dead vegetation. A leaking pipeline might also make a hissing sound you can **HEAR**.

Natural gas pipelines are the nation's safest method of transporting energy. While it's unlikely that a problem could occur, incidents can happen. Remember to call the Ohio Utilities Protection Service (OUPS), 1-800-362-2764, at least two working days before any landscape or construction digging project begins on your property—it's the law! And if you ever suspect a gas leak—walk away, right away. When you're clear of the area, call your local natural gas company or 9-1-1 for emergency response.
